

# BYE, BYE MISS AMERICAN PI

Welcome to  
my Life of Pi

There's something about your first piece

## WHY TARA LOVES PI:

"ARCHIMEDES was the first to estimate  $\pi$  rigorously in 245 B.C., which is my favorite year. ever.

"Liu Hui invented a quick method of calculating  $\pi$  and obtained an approximate value of 3.1416. That name alone is worth loving Pi!"

"BY 2000, A WHOPPING QUADRILLION DIGITS WERE CALCULATED BY FABRICE BELLARD, AND I CAN'T EVEN COUNT THAT HIGH SO I APPRECIATE SOMEONE WHO CAN!"

SO WHAT?

99% of teens don't care about Pi. BUT THEY SHOULD. Why? You may ask? The importance of Pi is that it is the universal ratio between a circle's diameter and it's circumference.

WHAT CAN I DO TO HELP?

Spread the Pi love by:

- holding a digit-counting contest. The winner gets a date with Tara!
- Pi-judging. Everyone must bake their own Pi Pie. The tastiest wins.
